

KITTEN ADOPTION & CARE MANAGEMENT SYSTEM

OVERVIEW

Designed the front-end UI (homepage, kitten cards, forms) with pastel styling.

Integrated images and linked all pages with PHP, ensuring smooth workflow.

Created the ER diagram and designed all MySQL tables with proper keys.

Handled backend queries, database connectivity, and schema structure.

Prepared project documentation and PPT content.
Tested forms, verified data flow, and ensured accuracy in outputs.

Helped in data entry for kittens, breeds, and testing multiple cases.

Supported debugging, validation checks, and organizing screenshots for submission.

ABSTRACTION

The Cute Kitten Adoption & Care Management System is designed for a kitten rescue shelter to store and manage information about kittens, adopters, adoption requests, vaccinations, and daily care activities.

The system ensures proper maintenance of kitten details such as breed, personality, health status, and vaccination history.

It also supports adoption workflows by connecting adopters with kittens through requests and approvals.

This project uses an ER model and relational design to build a normalized database with 8 interconnected tables. The implementation is done using MySQL with sample queries for demonstration.

PROJECT SCOPE:

PROJECT APPROACH

1. Maintain kitten information

TOOLS AND MATERIALS

1. Maintain adopter information

IMPLEMENTATION PROCESS

1. Track adoption requests

DATA ANALYSIS

- 1. Record kitten vaccinations
- 2. Record care activities served by staff

COLLECTED DATA

- 1. Provide reports and demo queries

KEY FINDINGS

SCOPE DISTRIBUTION OF THE KITTEN ADOPTION & CARE SYSTEM

Item 3
33.3%

Item 1
33.3%

Item 2
33.3%

Item 1 – Kitten Management (33.3%)

Handles kitten profiles, breeds, health status, and availability for adoption.

Item 2 – Adoption Process (33.3%)

Covers adopter registration, adoption requests, and request approval tracking.

Item 3 – Care & Vaccination (33.3%)

Manages kitten medical records, vaccination updates, and staff care activities.

CONCLUSION

The Kitten Adoption & Care Management System successfully models a real-world animal shelter.

It stores kitten details, manages adoption workflows, tracks vaccinations, and records daily care.

The project demonstrates ER modeling, relational schema development, SQL implementation, joins, foreign keys, and database normalization.
